

4soft is not only a producer of the graphic components, but mainly an installer of the original playgrounds. All products we offer are firstly tested on our playgrounds. We would like to share some of our realizations with you.

MAKE YOUR EPDM SURFACE more interesting and faster than the others

PLAYGROUND INSPIRATION WITH 4SOFT PRODUCTS AND GRAPHICS

3D halfballs

3D graphics are attractive playing elements in many ways – soft seats or only safe decorations of the playgrounds. Children just love them.

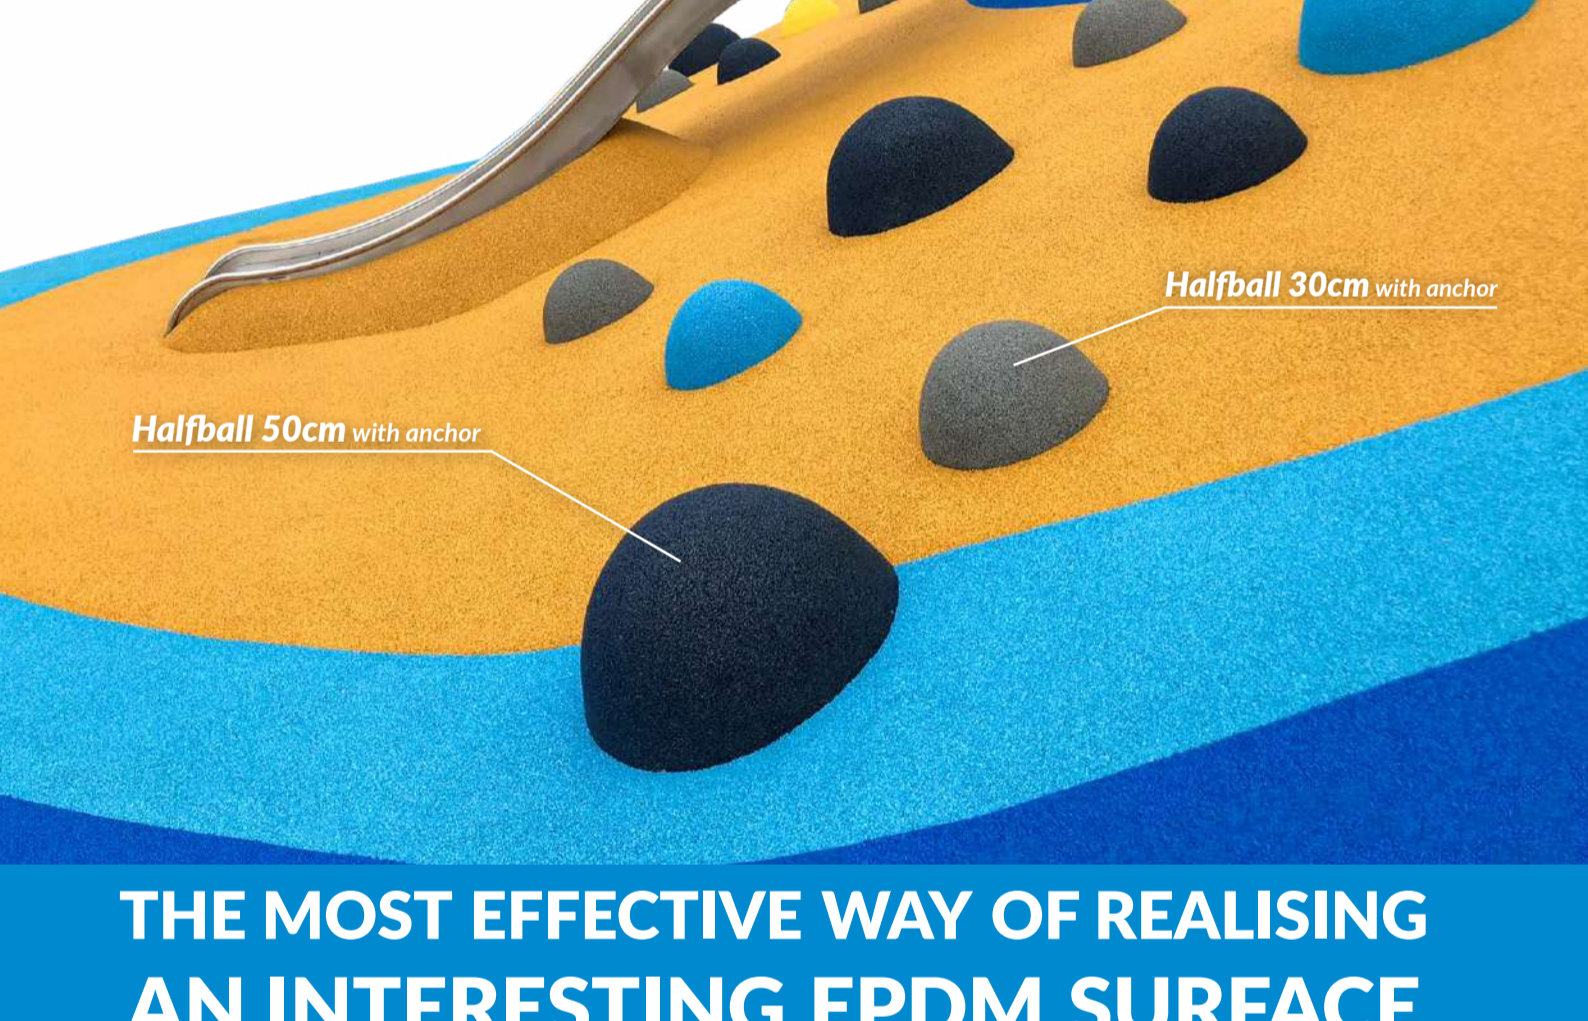

4soft 3D graphics is made from SBR and EPDM layer. Each individual part is hand made with emphasis on durability and safety. Each element is made from coloured EPDM granules without any additional surface painting needed.

Our 3D graphics are certified according to EN 1176-1 standards.

To reach a perfect result, combine 3D shapes with standard 2D graphics.

THE MOST EFFECTIVE WAY OF REALISING AN INTERESTING EPDM SURFACE

Palisades

4soft 3D shapes can also be installed on artificial turf, rubber tiles, concrete or in large sandpits as parts of playing equipment.

There are many ways of using our graphics to transform a dull EPDM surface into an entertaining and educational place. All you need is just to choose the right graphic components and glue them. The rest of the surface installation is then very simple.

EPDM Seater dia.40 cm, h.50 cm M1-01C-00

Several height options

EPDM Seater dia.40 cm, h.30 cm M1-01A-50

Can be provided with anchor

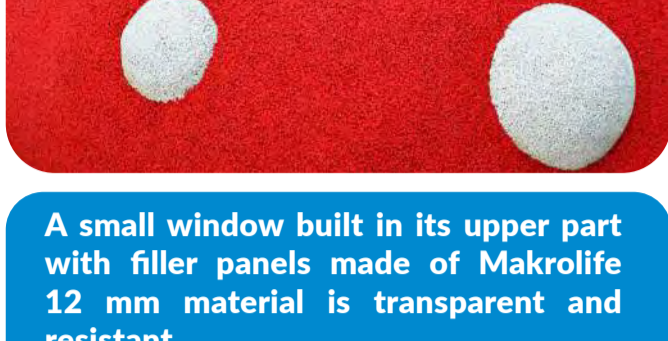

3D Playhouse

The 3D PLAYHOUSE is another playing element for children to be placed on the EPDM surface. The structure of this element consists of stainless steel covered with a certified two-layer steel surface. The 3D PLAYHOUSE can be used separately as a single element or as a part of the complete playground equipment.

The 3D PLAYHOUSE can also be made in other theme-specific modifications.

A small window built in its upper part with filler panels made of Makrolife 12 mm material is transparent and resistant.

The 3D PLAYHOUSE can be climbed over and used as a climbing wall. Its surface is fitted with grips enabling easier movement over the element.

Small halfballs for more play options

Durable top window

Stainless steel inner shell

Attractive graphics

Reinforced windows

Durable (anchored) EPDM grips and steps

Splash areas and fountains

Combination of 3D graphics and splash areas is great in the summer time. A water nozzle can be put into any 3D shape according to your demand. Water fountains can be a part of standard playgrounds.

All you need is a standard water garden connection with normal pressure of 2.5-3.5 bar.

Stainless steel Tunnel T2-01A

3D Bee Hlve L4-02A-20

3D Caterpillar with numbers K5-02A-70UV

Ladybird K5-01A-01

EPDM Hill with fountain W1-05A-03

There are two options of controlling the opening and closing of water connection to the fountain.

- A standard stop cock (stop tap) included.

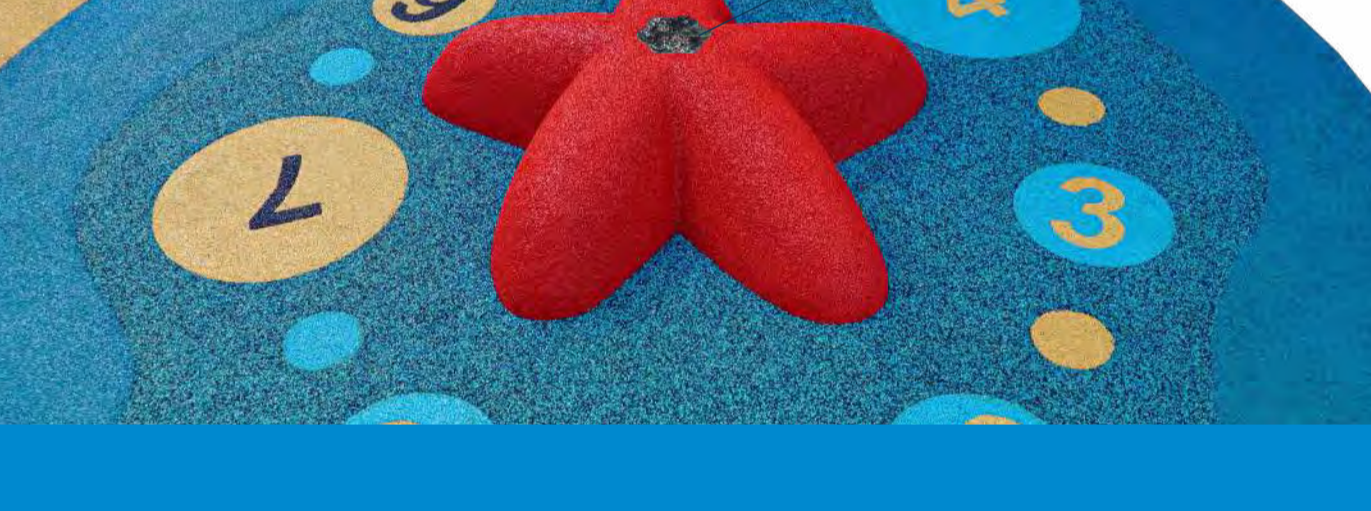

- Electric button - there is a possibility to set up the duration of water spraying from the fountain. It works with a 6V battery

- no need to have a 220V supply.

Optional remote control

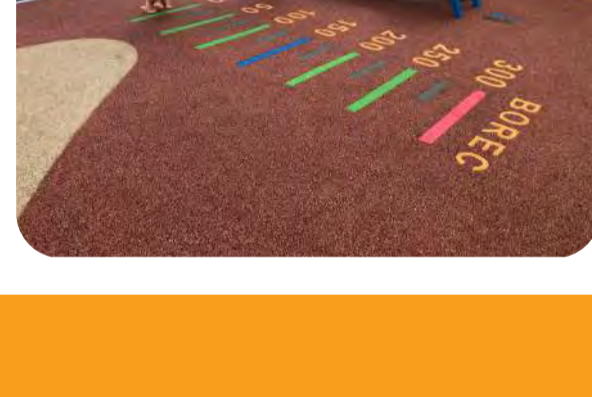

Water fountains have minimal water consumption ranging from 2,6l/min to 7,4l/min

Sports, games and exercise

4soft graphics is revolutionary in the necessity of making just a single investment to solve the problem of creating one place for different purposes such as:

- small sports grounds for ball games,
- outdoor classrooms with educational features,
- places for theatre performances,
- small traffic parks for ride-on toys,
- areas for drawing with chalk,
- places for learning, sports, relaxation and entertainment.

Multi-purpose play areas
